

## IJCA General CRC Review Guidelines

**International Journal of Computer Applications (IJCA) maintains a set of guidelines which must be followed by conference organizers while accepting the camera-ready copies of accepted manuscript for inclusion in; and publication with IJCA.**

- I. The papers must be reviewed and the contents must be verified against any sort of plagiarism.
- II. The papers must comply with the IJCA research paper template
- III. The headings, sub-headings and figures must be numbered according to IJCA template.
- IV. Figures must be clear. Labels must not be truncated. The text labels in the images must be clearly visible.
- V. The authors must develop original image. The images must be of high resolution for proper rendering of the final published PDF paper and should not distort on zooming. Or the author can use Microsoft Office tools to create the images. The images need not be colorful. If need be, the author must accommodate the image throughout the width of the paper (both columns).
- VI. The authors should use the features of Microsoft Equation or suitable software to create the formulae. Images of the formulae are not acceptable.
- VII. The CRC must be cross-checked for any typing and spelling errors.
- VIII. The abstract should not generally start with “We”, “In this paper”, “Because” et. cetera.
- IX. List of references must be expanded by adding more recent journal papers to include further data sources. Minimum of 12 references are necessary.
- X. The author should try to import the graphs directly from MS Excel or other tools rather than converting the graph into a bit-map image. This reduces the quality of the graph.
- XI. Isolated website references such as “[1] [http://en.wikipedia.org/wiki/GPS\\_tracking](http://en.wikipedia.org/wiki/GPS_tracking)” must not be used. The reference must be accompanied with relevant information regarding the source.
